Bootstrap Ant Design Git/GitHub Jira

PROJECT

Employee leaves management system(Mcs project)

📅 2-Month

- Languages: Html Css ,php ,databases. The main objective of this live project is to help the employee levees.
- In the second approach these word vectors were given weights according to POS polarity and Naive Bayesian Classifier was used.

PROJECT

Gym management system web application(Self project)

📅 1-Month

- Languages: I developed a gym management system web application using React, HTML, CSS, JavaScript, Ant Design, and Bootstrap. The application allows gym owners and users to manage and track memberships, schedules, and trainers effectively."
- I built the frontend using React and managed component-based architecture for modularity and reusability. I utilized Ant Design and Bootstrap for responsive and visually appealing UI components, such as tables, forms, and modals." State Management: "I used React hooks like useState and useEffect to manage state and handle side effects." Data Handling: "The data for trainers, schedules, and memberships is managed using JSON files. I implemented JSON parsing and manipulation to dynamically render information in the app." Responsiveness: "The UI is fully responsive, ensuring a seamless experience across devices by using Bootstrap's grid system and Ant Design's layout features."
